**CHRISTIAN JAUK**  
CHAIRMAN OF THE BOARD

How much do our expectations and material resources have to do with each other? A good deal, according to research on happiness. If our material circumstances do not match our expectations, then happiness remains an elusive goal. A basic level of material comfort is of course necessary. Without it, achieving happiness is very difficult indeed. But equally important is something we call a feeling of coherence. This describes the condition under which a person experiences their life as meaningful, intelligible and something they can fashion for themselves. When it comes to finding happiness, these elements are of central importance.

**CONSTANTIN  
VEYDER-MALBERG**  
MEMBER OF THE MANAGEMENT BOARD

Material goods can contribute to a sense of meaning in our lives. Through them, we can give shape to our own experiences and help to meet the needs of others. Altruism is as intrinsic to humanity as the pursuit of profit for oneself. When these two things exist in a well-balanced harmony with one another, we experience a feeling of well-being that most often arises when we are able to bring our own strengths to bear – whether these are intellectual or material in nature. I hope you will allow me a small observation: material goods are best put to use for social causes in exactly the manner demonstrated by our private philanthropic foundation, "Philanthropie Österreich".

Do you always seem to be standing in the slow queue at the airport or stuck in the slower-moving lane on a congested motorway? Perhaps the neighbour's grass is greener? We quickly start to believe that happiness has abandoned us and we trust our own perceptions in these moments much too readily. Because what seems to be "true" is often not as it appears – it is certainly not as true as we have convinced ourselves it is. Systems theory has filled bookshelves on exactly this topic.

Our guest author, Michael Lehofer, has spent a great deal of time considering the relationship between money and happiness. As a psychiatrist, psychologist, psychotherapist, philosopher and management coach, he knows what he is talking about and can illuminate the matter from a variety of perspectives. He discusses that common sense maxim that money cannot buy happiness and investigates in his essay here what it takes to be happy.

Imagine you suddenly came into some money and you may do what you want with it without having to answer to anyone. Would you save it? Buy something? Donate it? Whatever you end up doing, the money itself will not have a lasting effect on your happiness. The reverse of the popular maxim, that no or little money can ensure happiness, is also complete nonsense. A decent life is difficult without a sound financial basis and economic pressures cannot simply be ignored. Erich Kirchler, who used this scenario involving a windfall of money in a scientific experiment, demonstrated that happiness cannot be bought with money. The kind of happiness money brings dissipates much more rapidly than that which comes from strong relationships, for example. Michael Lehofer's essay therefore has been given the provocative title "Happiness In Spite of Money". We hope you will find it inspiring.

And for what it's worth: statistically speaking, the reasonable course of action in congested traffic is simply to stay in your own lane and wait it out. Regardless of what your satnav tells you!

# Performance and Key Figures

## PERFORMANCE AND KEY FIGURES OF CAPITAL BANK – GRAWE GRUPPE AG

	31.12.2015	31.12.2014	31.12.2013
	€ '000	€ '000	€ '000
Total assets	882,830	933,233	920,513
Loans and advances to customers	251,319	219,473	170,454
Deposits from customers	380,748	382,011	362,075
Operating profit	16,725	20,429	14,101
Profit from ordinary activities	10,845	29,551	7,661
Total capital ratio pursuant to Art. 92 of EU Regulation no. 575/2013	18.2%	16.9%	24.8%
Volume of client custody accounts	8,929,724	8,818,643	8,202,288
Employees (excluding subsidiaries)	147	157	167

## **Business performance**

Historically low interest rates, significant corrections on the international stock markets at the end of the year triggered by increasing concerns regarding China's economic development, as well as the rapid fall in oil prices presented serious challenges to investors in 2015. Major uncertainty prevails among market participants. These overall conditions will also persist in the 2016 financial year.

Capital Bank – GRAWE Gruppe AG (Capital Bank) requires of itself that it will make the right investment decisions, including against this difficult background. Being a reliable and fair partner to customers and business partners is particularly important during difficult times. Capital Bank showed the importance that it attaches to fairness by being the first bank in Austria to introduce independent fee-based advice. All hidden commissions from product providers are disclosed with this and shared with the customer.

The bank's reliability and professionalism is highlighted by its outstanding performance in the Fuchs Report. This involved an examination of numerous Austrian providers and a total of 89 European asset managers. The assessment states that Capital Bank can be recommended without restriction. It also states that "Capital Bank meets all requirements in the quality of its consultation and in transparency". As such we achieved an outstanding result once again after 2013, when we were awarded the honour of best Austrian private bank and were ranked second across the whole of Europe.

Capital Bank is also a favourite contact for the media. Around 3.5 mentions per week in various media on relevant professional topics in the financial sector illustrate that the bank's representatives are considered to be valued experts in the area of asset management.

Private banking is Capital Bank's core business. Assets under management rose by 13.4% as a consequence of attracting new customer money and also generating gains on stock exchanges. The value of expertise and support from a reliable partner in monetary investments can be seen in challenging times in particular. This was also confirmed to us by a large number of customers in intensive discussions.

The bank's loan business performed very favourably with an increase in total commitments of around 19.9% to €307.7 million. The focus in the financing

area here has traditionally been on securities Lombard loans.

The private banking business concentrated on a number of priorities in the 2015 financial year. Several events, podium discussions and presentations on current professional topics were organised for instance throughout Austria. Statutory reforms in 2015, such as the reforms to inheritance law and property transfer tax as well as changes to the deductibility of donations, affected lots of different parties and incited real need for clarification. Working with selected experts we were able to offer an attractive additional service to our customer with these events. New software has been in place for customer support in private banking since 2015. This software not only supports the customer support process, it also provides added value to our customers in the form of modern reporting.

The Family Office department, which specialises in services for high-net-worth individuals, private foundations and family businesses,

delivered an encouraging performance once again by expanding its business volume by 13.3%. The core competency of the Family Office department is specific consideration of individual customer requirements on all financial matters. This may also include the implementation of specific topics, such as support with the acquisition or sale of a company or structuring a special financing deal.

In recent years the Family Office has established itself as a centre of expertise for absolute return deals and investments in private equity funds, providing an attractive earnings component for portfolio diversification.

The Asset, Product & Quality Management (APQM) division occupies a central role at Capital Bank with various areas of responsibility. Its main role is central asset management of customer funds. The focus here is on achieving an attractive risk / earnings ratio in line with the different risk classes.

APQM also provides capital market expertise to private banking, e.g. through preparation of investment proposals and event-driven formulation of stock and market estimates. The bank's own issues of securities are also structured and managed by this division. APQM has also been responsible for advising on fund management at Bankhaus Schelhammer & Schattera AG since the end of 2015, particularly in connection with sustainable asset investment. The division also provides support with securities

deposits by third-party banks and insurance companies. A crucial increase in efficiency has been achieved by optimising depositories.

The issue of charitable and not-for-profit activities is also handled by APQM. Aside from the administration for the Philanthropy Austria Foundation, this also includes the provision of philanthropy advisory services. As such, Capital Bank is acting as a pioneer in Austria.

The “Platform” is the division of Capital Bank that fulfils the role of depository for clients of investment firms. The downward trend in numbers of securities deposited that has been in place for many years also continued in 2015. However, this trend was significantly less pronounced than in previous years. The “Platform” was able to record a positive net inflow of funds.

The division came under new management mid-year with the new Managing Director Stefan Wonisch and his deputy Markus Harrer. The Platform’s internal processes and IT landscape were also improved at the

same time. New resources were established in particular in relation to compliance in order to ensure that increased regulatory requirements are met.

The Investment Banking division specialises in investing in high yield corporate bonds. The collaboration that has been in place for several years with the Cardinal Point Fund located in San Francisco USA also continued successfully in 2015. The High Yield Bonds segment experienced its most challenging market phase this financial year since 2008/09. Although the High Yield Index finished the year with a negative performance, the Cardinal Point Fund managed to achieve a positive increase in value and to beat the benchmark index significantly as a result.

Capital Bank belongs to the GRAWE banking group. All staff and service divisions belonging to the banking group are located within the parent company HYPO-Bank Burgenland AG, where they provide their services to the banks in the GRAWE banking group. Significant quality and cost synergies have been realised in recent years as a result of this consolidation.

Capital Bank constantly makes great efforts to ensure that the standard of training and professional development for its employees is at a very high level. The advanced professional skills and qualifications of our employees, together with their commitment and our regular investment in training and development,

all mean that we can look forward to the performance of our bank with a great deal of confidence, both in the coming financial year and over the longer term. As at 31 December 2015, Capital Bank had 161 employees (previous year: 168 employees).

Capital Bank is conscious of its social responsibility as a member of society. During the year under review, it offered a large number of presentations and lectures on economic issues free of charge. In the specialist lectures delivered at universities, the bank's primary aim in all cases was to provide students with expert knowledge and give them an insight into day-to-day business practice in the banking industry. Capital Bank also provides financial support for numerous social and higher education institutions.

### **Essential equity investments**

Security Kapitalanlage Aktiengesellschaft (Security KAG) celebrated its 25<sup>th</sup> anniversary in

2015. Over this period Security KAG has managed to develop an outstanding reputation as asset manager for Grazer Wechselseitige Versicherung and as an investment company for the GRAWE banking group. It currently manages 54 funds with a value of approx. €3.8 billion as at 31 Dec. 2015. The 2015 financial year was used as an opportunity for aligning the company and its investment approach more towards sustainability. Together with its sister bank Bankhaus Schelhammer & Schattera AG it is already the second biggest provider of sustainable retail funds in Austria.

Brüll Kallmus Bank is the specialised bond bank of the GRAWE banking group. With branches in Vienna, Graz and Linz as well as in Sežana in Slovenia, the two business areas of Institutional Banking and Capital Market Financing service institutional and quasi-institutional customers as well as public institutions throughout Austria and neighbouring countries.

Providing support to professional market participants with bond and bonded loan issues, placing issues on the primary market and arranging deals on the secondary market complete the services offered by Brüll Kallmus Bank.

BK Immo Vorsorge GmbH which was established in 2009 specialises in the construction of residential property specifically aimed at buy-to-let investors, the purchase and renovation of older real estate and

the design of "building contractor models" in which the investor is established as the principal construction or development contractor. The company has been able to maintain a good position in all existing market phases on the real estate market and has made an encouraging contribution to comprehensive income over the last few years.

### **General economic conditions**

The eurozone had a comparatively good start to 2015. Aside from Spain with its comprehensive reforms and economically strong Germany, significantly positive growth rates were also recorded at the start of the year in Italy and France. Private and public consumption represented the growth drivers. A new package of aid was also provided to Greece in the summer, thereby avoiding a simmering source of danger for the time being. However, the international environment also turned out to be a challenging one in the first half of the year. As in the previous year, special factors such

as the weather and wide-ranging strikes hampered economic development in the USA. The continuous fall in oil prices also affected the US economy.

However, this affected oil-exporting emerging nations such as Russia, Brazil and Venezuela in particular, which plunged into a deep recession over the course of the year as a result of oil price developments. For the eurozone, negative factors such as disappointing economic performance at the international level have so far been balanced out by positive factors such as the low euro, low oil prices and an expansionary monetary policy. According to the latest estimates from the International Monetary Fund (IMF) the eurozone economy is expected to have grown by 1.5% in 2015. This would correspond exactly with the IMF's estimate from the previous year. By contrast expectations had to be revised downwards slightly for the USA. Following growth of 2.4% in 2014, the IMF now expects just a marginally higher growth rate of 2.5% in 2015.

### **Divergent monetary policy**

The European Central Bank (ECB) continued its expansionary monetary policy in the year under review. On 22 January the guardians of the currency in Frankfurt announced their intention to step up their bond purchases significantly and to extend these to eurozone government bonds. They aim to purchase assets amounting to 60 billion euros each

month by September 2016 at a minimum. This step was the European Central Bank's response to the continued low inflation expected in the eurozone. The ECB increased its efforts again in December by reducing its deposit interest rate to  $-0.30\%$  and by temporarily extending its bond purchase programme.

In the USA the Federal Reserve Bank considered it necessary to postpone its reversal in interest rates on several occasions, given the sluggish economic performance at the start of the year and the increased risk of a hard landing for the Chinese national economy. However, the first increase in interest rates did take place in just under ten years at the December meeting of the US Federal Reserve, with an increase of  $0.25\%$  to a range between  $0.25\%$  and  $0.50\%$ . Further interest rate increases are forecast for 2016, although capital market prices show that the interest rate steps could be more cautious than recently expected by the Fed's Open Market Committee.

## **The price of oil and China characterised a difficult year on the stock markets**

Following a difficult autumn in 2014, the international stock markets started the new year in a jovial environment. The European stock markets in particular showed the strongest performance during the first few months, supported as they were by the ECB's expansionary monetary policy. By 10 April the German leading index the DAX had gained more than 25% to 12,374 points. The broader EUROSTOXX 50 Index was only just behind with an increase of just under 22% by mid-April.

At the same time the US stock markets also performed a solid sideways movement based on the increasing strength of the US dollar. European stock exchanges finally showed their first signs of fatigue from mid-April. At the same time the share prices on China's mainland stock markets appeared to rocket. By 8 June the Chinese CSI 300 Index had gained more than 52%. The aggressive speculation demonstrated by private Chinese investors did, however, have some nasty consequences, with a 30% fall in share prices in the second half of June. The Chinese authorities made every effort to halt the slump in prices. A second wave of sales followed in August, ultimately ensuring an earthquake on the global financial markets from which the latter had only partially recovered by the end of the year.

The risk of a “hard landing” for the Chinese economy was suddenly assessed as considerably higher by the capital markets than it had been just a few months before. The sustained fall in oil prices also fuelled these fears. However, no dramatic slowdown has been observed as of yet in China based on the economic data. Thanks to a strong first six months the year still ended on a positive note for the Chinese CSI 300 Index (+5.6%) and the German DAX (+7.6%). By contrast the US S&P 500 Index suffered its first negative year since 2011.

### **Turbulent year on the bond market**

The bond market also experienced an unusually turbulent year. By mid-April returns on ten-year German government bonds had fallen from 0.55% to just a few basis points. This price of these instruments rose significantly as a result. As a benchmark for the price level of ten-year German government bonds the Deutscher Bund Future reached a new high in April at more than 160 points.

Yet this market also underwent a significant correction. Returns rose to just under one per cent within just two months. This resulted in price drops of between 7–8% for supposedly safe German government bonds. US government bonds also performed in a similar fashion, although this was less severe in both directions. Both markets did still record annual results that were marginally positive.

### **Strong US dollar, weak yuan**

While the European Central Bank and Bank of Japan stepped up their expansionary monetary policy along with other central banks, the US Federal Reserve Bank had a somewhat more restrictive structure to their monetary policy. In view of the divergent monetary policy there was a significant upwards trend for the US dollar, particularly as compared with the European common currency. The euro for instance fell from more than 1.2 to less than 1.1 to the dollar over the course of the year.

However, the performance of the Chinese yuan, or renminbi, is particularly noteworthy at this point. After years of the yuan being pegged, China finally introduced a more flexible exchange rate system in 2005, even through this was still subject to heavy regulation. The yuan appreciated in value on a constant basis over the next few years, i.e. by around 35% against the US dollar, with this only interrupted by a new two-year pegging as a result of the 2008

financial crisis. China unexpectedly devalued the yuan in August 2015. Although this was praised by the International Monetary Fund, the capital market viewed the operation with major unease. Further devaluations followed until the end of the year, further increasing uncertainty on the capital markets.

## **BUSINESS PERFORMANCE**

### **Balance sheet**

The total assets of Capital Bank fell in 2015 by 5.4% from €933.2 million to €882.8 million. On the assets side, loans and advances to customers rose by 14.5% to €251.3 million. On the liabilities side, deposits from customers fell slightly by €1.3 million to €380.7 million. At the same time the volume of the bank's own issues fell 7.6% from €330.0 million to €305.0 million.

Capital pursuant to Part 2 CRR increased in the 2015 financial year by approx. 1.7% from €134.5 million to €136.8 million. By contrast the capital requirements fell by 5.4% to €60.1 million. This results in an capital surplus of €76.7 million. The capital surplus was capable of being expanded by €5.8 million or 8.1% on the previous year. The capital ratio, i.e. the amount of equity capital in relation to the calculation basis according to CRR, increased from 16.9% to 18.2%. Of the reported eligible capital of

€1036.8 million, 91.5% was accounted for by tier 1 capital.

The return on equity, which is calculated from the ratio of the profit for the year before taxes to the equity excluding distributable profit before changes in reserves, (ROE: 2015: 8.7%; 2014: 23.6%) fell by around 14.9 percentage points on the previous year's level. This is attributable to the lower profit for the year before taxes in 2015. The return on assets, the ratio of the profit from ordinary activities to the average total assets, fell in the period from 3.2% to 1.2%. The return on capital employed also fell by 28.3 percentage points, from 46.4% to 18.1%. The return on capital employed is calculated as the ratio of profit from ordinary activities to the capital requirements.

As the focus at Capital Bank is on fee and commission business, the changes in total assets and the comparison with traditional retail banking are less important in an analysis of the bank's performance. The long-term objective of the bank is to generate returns commensurate with the risks involved in the interests of the owner and thereby to continue to increase the profitability of the business in the future.

## **Income statement**

Capital Bank generated a profit from ordinary activities in the 2015 financial year amounting to €10.8 million, which is therefore below the previous year's level of €29.6 million. The high result for the previous year was achieved not least as a result of one-off effects in the valuation results. The 2015 results are still above the average profit from ordinary activities recorded over many years, and therefore represent a welcome success. Net fee and commission income and net financial income together rose by €1.4 million to €23.6 million. Net interest income rose a substantial 24.0% in the period from €7.9 million to €9.9 million.

Personnel expenses fell slightly by 0.7% to €14.8 million, while administrative expenses rose moderately by 5.3% from €7.9 million to €8.3 million.

Capital Bank generated an operating profit of €16.7 million for 2015. This equated to a fall

of approximately 18.1% on the operating profit of €20.4 million generated in 2014. The cost-income ratio rose accordingly on the previous year from 53.5% to 59.0%.

### **Volume of client custody accounts**

In 2015, Capital Bank continue to focus on gaining market share and thus expanding its volume of client custody accounts. However, the growth of 1.3% in the volume of client custody accounts from €8.8 billion to €8.9 billion fell short of forecasts. Our subsidiary, Security Kapitalanlage Aktiengesellschaft, once again substantially increased its volume of custody accounts from €3.4 billion in 2014 to €3.8 billion in 2015. This equates to a year-on-year increase of 11.0%. In 2015, the Capital Bank sub-group achieved a new high of €13.4 billion (+3.6%), with a growth in assets under management (including own issues) of €460.1 million.

### **Proposed dividend**

The profit from ordinary activities generated in the 2015 financial year amounted to €10.8 million. Capital Bank will not pay a dividend to its shareholder HYPO-Bank Burgenland AG following the resolution passed at the annual general meeting. The annual profit will therefore be used to reinforce the capital base even further.

## Outlook

The economic outlook for the eurozone is brighter at the start of 2016. The forecasts for economic growth have risen slightly over the last twelve months, contrary to the international trend. The International Monetary Fund (IMF) for instance is predicting growth of 1.5% for 2015 (with 1.2% predicted in the previous year). For 2016 the previous year's forecast was 1.5% – the IMF is now expecting growth of 1.7% for 2016 and 2017. Favourable framework conditions have provided the prerequisites for this. The low price of oil has relieved the burden on private incomes and created a consumer-friendly environment, the low euro has boosted exports from the eurozone, and the expansionary monetary policy is beginning to have an impact on the demand for credit. The fact that growth has still been comparatively moderate given these framework conditions is down to global economic developments. Aside from a rekindling of the euro

crisis, global growth currently represents the greatest risk to the eurozone economy.

Contrary to earlier expectations the dynamic in the US economy is failing to pick up speed. Current forecasts from the IMF assume growth of 2.5% in 2015 and 2.6% in both 2016 and 2017. This is considerably below expectations from the previous year. As in Europe, private consumption is also the pillar of growth in the USA. This trend is expected to continue given the fall in unemployment rates and rise in salaries.

The performance of the People's Republic of China is creating major uncertainty in all forecasts. Indications of a "hard landing" for the world's second largest economy are currently increasing. All growth expectations would have to be significantly revised downwards in such a scenario.

Our aspiration is to be the leading independent private and investment bank in Austria. In order to meet this aspiration we examine our internal processes and systems on a regular basis, review our business model constantly, scrutinise our advisory approach and do not shy away from making corresponding adjustments. The path for growth, i.e. winning new customers and expanding customer assets, is consistently pursued further.

The current uncertain market environment requires clear and structured decisions aimed at finding

well-established investment strategies that meet the customer's needs. It can be difficult for private individuals, particularly from different lines of business, to track all current market developments and to draw logical comprehensible conclusions from these. It is often a question of time, since professional investment of funds can no longer be achieved on top of a career and other obligations. We take this need for trusting advice on investing assets seriously, and try to find the best individual investment solution for each and every customer.

Incorporation of Bankhaus Schelhammer & Schattera AG into the GRAWE banking group means that Capital Bank has had a new sister bank since 2015. Processes and resources need to be adapted and synergies leveraged against this background. Capital Bank, or rather the APQM division, will be taking on activities associated with ethically sustainable asset investment in this regard. The right framework conditions need to be ensured for this in 2016. Interested customers of Capital Bank should subsequently

benefit from the expansion of the product range to include ethically sustainable asset investment.

**Events after the balance sheet date**

There have been no significant or consequently reportable transactions or events since the balance sheet date.

## **Introduction**

At Capital Bank, risk management is defined as a process (based on a division of labour) for identifying, measuring, monitoring and managing defined risks at the banking group level. A risk management system with an appropriate level of quality is seen as a significant factor if the required growth of the business is to be successfully sustained over the long term. The risk-policy principles, responsibilities as well as control principles are enshrined in the GRAWE banking group's risk management. The responsibilities are clearly regulated in terms of content and function.

The objectives in the risk management unit are to identify, quantify and actively manage all the risks arising in connection with banking operations (credit risk, market risk, interest-rate risk, liquidity risk and operational risk). Pursuant to the provisions set out in section 30 (7) of the Austrian Banking Act (BWG), HYPO-Bank Burgenland AG, as the parent bank, is therefore responsible for satisfying the Internal

Capital Adequacy Assessment Process (ICAAP) requirements at consolidated level. The entities included in the ICAAP consolidation for HYPO-Bank Burgenland AG comprise Bankhaus Schelhammer & Schattera AG incl. subsidiaries, Capital Bank incl. subsidiary banks, BB Leasing, Sopron Bank as a banking subsidiary based in another EU country as well as GRAWE Vermögensverwaltung as a mixed financial holding company pursuant to. Article 4 para. 1 No. 21 CRR. The risk strategy in the HYPO-Bank Burgenland Aktiengesellschaft banking group is to take on standard banking risk within a defined framework and to exploit the resulting potential returns. To this end, a risk management system has been set up in the HYPO-Bank Burgenland Aktiengesellschaft banking group. This system forms the foundation for strategic bank management based on risk and returns and therefore promotes selective growth.

At Capital Bank, risk management is a central function that takes into account the regulatory framework based on the Austrian Banking Act (BWG), the CRR, as well as various policies and guidelines, along with the nature, scope and complexity of the transactions specific to the bank and the resulting risks to which the bank is exposed. The risk management system at Capital Bank is integrated into the risk management cycle managed by HYPO-Bank Burgenland Aktiengesellschaft.

Risk management is defined as a process (based on a division of labour) for identifying, measuring, monitoring and managing various risks. The basis for risk management in the HYPO-Bank Burgenland Aktiengesellschaft banking group is a strict segregation between front office and back office functions. The various risk management functions are brought together under the member of the Management Board responsible for risk management. The activities of the risk management units are conducted in accordance with the risk policy guidelines laid down by the Management Board. These guidelines specify how risks are to be controlled and how they are to be monitored competently and in a timely manner in conjunction with the individual corporate units and the independent risk function. In application of the principle of proportionality, the organisation of risk management reflects – both qualitatively and quantitatively – internal requirements, the business activities involved, the bank's strategy and the risk situation. Organisationally, the risk management system is located

at banking group level and is the responsibility of HYPO-Bank Burgenland Aktiengesellschaft. The responsibilities of the risk management unit at Capital Bank include the control of market risk, liquidity risk, credit risk and operational risks, risk management for the subsidiaries of Capital Bank as well as overall control over the bank. The operational management of credit risk is carried out by the credit risk management department. The implementation of risk management for the banking group involves close cooperation between the risk management unit at HYPO-Bank Burgenland Aktiengesellschaft and Capital Bank.

### **Basic principles of risk management**

Risks at Capital Bank are controlled and managed through a system of risk principles, risk measurement procedures, limit structures and monitoring processes.

A key underlying component of the risk management process is the risk policy. The risk policy forms part of the corporate strategy, specifies the bank's risk appetite and risk focus, and sets out the framework within which the operational risk policy targets are to be pursued. At Capital Bank, the risk policy is determined by the Management Board taking into account the banking group developments and guidelines. It covers the planned development of the business as a whole from a number of different

dimensions, specifies limits for relevant risks and restricts concentration risk.

The risk policy principles represent a further component of the basic principles of risk management. The following risk policy principles have been specified as applicable throughout the banking group:

- The Management Board and all employees must act in accordance with the risk policy principles and must make decisions in compliance with these guidelines.
- In order to achieve the desired balance of risks and returns, the individual business divisions must be limited by means of risk and/or volume specifications taking into account the risk-bearing capacity of the bank.
- The methods used for assessing and measuring risk must be structured and applied according to the scope, complexity and risk content of the transactions involved in each case. The systems must cover not only the risk arising from

trading business but also any risk arising from an analysis of the bank's activities as a whole. The selection of methods should be flexible to permit sensible further development in the future.

- To ensure a consistent and coherent risk management process, standardised methods must be used for assessing and limiting risk.
- As part of the risk management system, a suitable system of limits must be implemented and continuously monitored. The overall bank limits must be used to derive and specify limit systems both for the individual sub-risks and also for the individual subsidiaries. The specified risk limits must be based on the potential risk cover. However, the entire potential risk cover must not be used up in connection with the measured risks; a proportion must be held in reserve for exceptional circumstances and other risks that have not been measured.
- Risk management and control processes reflect the statutory requirements currently applicable and will be adjusted in line with changing conditions. The risk management performance indicators are also included in a system for strategic bank management.
- In the case of significant types of risk that may jeopardise the bank as a going concern, the bank will endeavour to put in place a risk management

system that is at least similar to that in comparable banks in terms of structure and volumes (best practice principle).

- Responsibility for risk management lies at banking group level. In addition, every employee is encouraged to identify potential risk and initiate appropriate corrective action.
- The organisation of risk management is subject to the principle of segregation of functions between front office and back office and must ensure that conflicts of interest are prevented at all decision-making levels.
- For the purposes of ongoing risk management, regular reports on the risk situation must be submitted to the Management Board and to the decision-making committees at banking group and individual bank levels. The relevant organisational units are responsible for risk documentation and reporting.

Another key component of the risk management system is the product approval process, which is applied when the bank launches new products or ventures into new markets. Capital Bank generally only takes on exposures in those areas of business in which it has appropriate professional knowledge or relevant experts and in which it can assess the specific risks involved and carry out suitable monitoring. When moving into new business areas or products, a key prerequisite is therefore a suitable analysis of the risks specific to the business concerned. To this end, Capital Bank has set up a product approval process, which comprises defined rules and regulations for the organisation of the procedures involved. The process determines the procedures to be followed for issues, investments in new products and entry into new markets or areas of business. When the process is implemented, it identifies the main opportunities and risks, which then serve as a basis for decision-making.

### **Risk management**

In order to ensure there is a comprehensive, coordinated risk management system, the bank has drawn up an overall bank risk strategy and uses an overall bank risk manual together with work instructions as a documentation basis; it has also specified risk limits.

The overall bank risk strategy first defines general principles for risk management (basic principles, risk management process, organisation, etc.) and then set out risk strategies for each risk category. The objective of the risk manual is to meet the statutory and the business management requirements in respect of risk management. It provides support in the systematic handling of risk and enables employees and managers to systematically address the individual components of risk management. The service and work instructions, like the risk manual, have the objective of informing employees about special (risk) topics and their management in greater detail. In contrast to the risk manual, they are extremely detailed and are mostly restricted to specific individual topics.

The risk limits are defined at least once a year on the basis of the risk-bearing capacity calculation. Compliance with risk limits is continuously monitored and regularly reported to senior managers. If a limit is exceeded, limitation measures are to be decided upon

in cooperation with the management board and the respective area head in accordance with the respective risk.

The main tool used for risk management at Capital Bank is the calculation of risk-bearing capacity. In this calculation, the key risk figures from the individual types of risk are aggregated into an overall potential loss from the assumption of risk and in the same process compared against the cover assets (earnings, reserves, equity) available to be set against these potential losses. The aim of this comparison is to determine the extent to which the bank is able to sustain any unexpected losses (risk-bearing capacity). According to the risk-bearing capacity calculation, the goal is to ensure the certainty of the bank's continued existence. The Management Board decides on the overall risk strategy, which includes the allocation of the potential risk cover to the individual risk categories. The calculation of the risk-bearing capacity acts as a brake on all risky activities within the banking group. The risk-bearing capacity is calculated quarterly at banking group level and on an individual basis for all banks in the GRAWE banking group. Risk positions are also constantly monitored in order to be able to take ad-hoc risk-minimising steps when discrepancies arise.

Risk-bearing capacity is calculated using two methods: the gone concern approach, which focuses on protection for creditors, and the going-concern approach, which takes as its basis the need to ensure

the problem-free continuation of the bank as a going concern.

Under the gone concern approach, the capital available to the banking group for dealing with risks is the equity composed of the tier 1 capital, reserves and the supplementary capital, including from the profit already generated by the key date. Under the going concern approach the forecast value is taken into account in determining the risk coverage potential instead of the results already achieved. The methodology used for calculating the risks varies depending on the risk category and the selected analysis method. Credit risk (incl. consideration of risks from loans in foreign currencies and country risks), market risks in the banking book (incl. credit spread risks), operational risk, liquidity risk, investment risk, real estate risk and other types of risk as well as the macroeconomic risk are all taken into account with this. To determine the overall risk, the individual types of risk are aggregated without factoring in any adjustment for the effects of correlation between the types of risk.

During 2015, the bank at all times took into account the mandatory reconciliation process between the quantified potential risk and the risk coverage potential available to the bank. Calculations based on stress scenarios are also applied in order to assess the risks that could arise from extreme market volatility.

### **Management of special types of risk**

All risks in the banking group are considered as part of the overall bank risk management for Capital Bank. Given the bank's direction, material risk arises primarily in the areas of operational risk, legal risk and market risk. Particular attention is given to these risks in the monitoring and management process.

### **Market risk**

Market risk refers to potential losses that could arise from adverse changes in the market value of exposures as a result of changes in exchange rates (currency risk), share prices, indices and fund prices (equity risk), credit spreads (spread risk) and volatility (volatility risk). Risk exposures affected by market risk arise either in connection with client transactions or as a result of the conscious inclusion of such exposures in the bank's own portfolio. The main risk factors within the scope of market risk include

interest-rate risk, currency risk, price risk related to variable-yield securities and price risk related to interest-bearing securities caused by credit spread.

Market risk is managed by Group Treasury, the assets and liabilities committee, the capital markets committee and by the risk management unit, which is responsible for identifying, measuring, monitoring and managing market risk in the trading book and banking book. A key feature of the organisation of treasury activities is the segregation of front office and back office functions. The bank may only take on market risk within existing limits and only in respect of authorised products. These limits are specified annually by the Management Board and the Supervisory Board taking into account the risk-bearing capacity of the bank and the limits specified for the banking group. Key factors used in developing the limit structure are the desired degree of diversification in the portfolio and the trading strategy. The limits include country limits in addition to volume and exposure limits.

The bank may only conduct investments on its own account within defined limits. These limits are monitored continuously in accordance with the risk management guidelines for treasury investments. To all intents and purposes, currency risk is effectively eliminated at Capital Bank by means of currency-matched funding and the use of foreign exchange derivatives.

At Capital Bank, interest-rate risk is defined as the risk of fluctuations in the price of interest-bearing securities, arising in turn from changes in capital market interest rates. Interest-rate risk is managed for the whole of the banking group by Group Treasury and the assets and liabilities committee, which manage the interest-rate structure taking into account the risk involved. On the basis of interest-rate risk statistics from the Austrian National Bank (OeNB), it is possible to state that interest-rate risk at Capital Bank is at a low level compared with the regulatory threshold of 20% of eligible capital.

A particular aspect of market risk that affects Capital Bank is the risk arising from guarantees given in connection with the securities business. Capital Bank has given capital guarantees for certain products that it has designed and sold itself, and for products that are sold by insurance companies. The PZV (prämienbegünstigte Zukunftsvorsorge) product, a special pension plan product offered in Austria with a government subsidy, is especially important in this context because Capital Bank assumes responsibility

for the capital guarantee in connection with this investment product in accordance with statutory requirements (section 108 (1) no. 3 of the Austrian Income Tax Act (EStG)). The Bank has also assumed guarantees for unit-linked life insurance. Under this capital guarantee, the bank guarantees with the PZV (prämienbegünstigte Zukunftsvorsorge) product, a special pension plan product offered in Austria with a government subsidy, that the client will receive a payout that is at least equivalent to the amounts paid in plus the government subsidy. Capital guarantees and maximum level guarantees are also provided in unit-linked life insurance. The risk associated with capital guarantees is subject to greater monitoring in the risk management system. Even before the bank took over responsibility for this guarantee, the product was subject to an authorisation process in which, both within the bank itself and also with third parties, the product process was discussed in detail, various problems were addressed and solutions drawn up. Within the capital guarantee management process at Capital

Bank, trends regarding the guarantees are monitored, as are the investment criteria and the performance of the underlying funds. Stress tests are also regularly carried out for the capital guarantees in order to highlight the impact of market trends on any payment that may have to be made under the guarantee. In addition, the bank holds regular guarantee meetings in which it discusses material changes concerning the capital guarantee portfolios and the underlying funds with Security KAG and Grazer Wechselseitige Versicherung AG. Guarantees with a total guaranteed sum of approximately €295.1 million were outstanding in the banking group as at the balance sheet date. The guarantees are matched by corresponding recoverable investments. The capital guarantees are stated as derivatives.

### **Operational risk**

At Capital Bank, operational risk is defined in the same way as in the statutory provisions as the risk of unexpected losses caused by the inadequacies or failure of internal procedures, people or systems, or by external events, and includes legal risk. A more detailed and then aggregated measurement and management of risk should therefore be applied, for example, to breakdowns in IT systems, damage to property, processing failures, fraud, natural or other disasters and changes in the external environment.

Such risks must be classified according to the cause of the risk so that operational risk can be identified and analysed with precision. The purpose of risk categories is to help the bank to analyse the size, cause and impact of operational events that occur. Self-assessments are also used to support the process of ascertaining the potential risk. Loss events are recorded in a separate database on an ongoing basis. Additional risk information can be obtained from various risk indicators, such as the number and duration of system breakdowns, findings from internal audits (process risks) and the frequency of complaints and claims against the bank. The principal concern of risk management is to find an answer to the question as to whether and how an existing risk can be mitigated. The task of risk management is therefore to search for solution options and possible corrective action. The task is carried out by the department responsible for the risk, generally in collaboration with the Internal Audit and Organisation units.

The management of operational risk at Capital Bank is the responsibility of the risk management unit. The duties of the unit include classifying the risks, drawing up standard guidelines for use throughout the banking group, managing the operational risk database, analysing loss events and preparing reports for the Management Board and various committees. Based on the standards applicable throughout the banking group, loss events related to operational risk are assembled in one database. This database can then be used as a basis for identifying weaknesses in systems and processes and then for initiating appropriate corrective action.

The systems and structures used by Capital Bank to minimise operational risk also include internal control systems (including control systems managed by Internal Audit), clearly documented internal guidelines (work instructions), segregation of functions, the principle of double-checking by a second person, allocation and limitation of decision-making authority, together with an ongoing process of training and professional development (personnel development) to ensure that employees have the requisite skills and qualifications, which they then continue to enhance. These internal management and control measures integrated into the business processes are intended to ensure that there is an appropriate, acceptable level of risk within the bank.

In the context of operational risk, Capital Bank pays special attention to the risk associated with

the provision of advice, a risk that arises particularly in the private banking business. To manage this risk, the bank has developed special risk management procedures that have now been used for a number of years in the private banking business and have been refined over the course of time. The main focus of the risk strategy in this case is to discover any possible errors in advice or undesirable developments at an early stage and identify associated advisory or reputational risks. Scheduled meetings take place with the market segments and the Management Board as part of these risk management activities.

Capital Bank uses the Basic Indicator Approach to determine its capital adequacy for operational risk in accordance with Basel III.

### **Credit risk**

At Capital Bank, credit risk is defined as the default risk that arises in connection with loans and advances not evidenced by certificates and loans and advances

evidenced by certificates (securities) to third parties. The risk is that these loans and advances may not be repaid in full or on time to Capital Bank. The situation may arise from developments at individual counterparties or from general problems affecting a large number of counterparties. Credit risk may also arise from particular types of product design or types of business. Expert management of all credit risks is the responsibility of the credit management unit. This unit carries out the banking operations on the assets side of the balance sheet at an operational level. The tasks include checking all finance applications from the perspectives of risk and credit quality in accordance with the relevant guidelines, reviewing compliance with measurement and assessment guidelines and identifying any early warning indicators. At Capital Bank, risk in the lending business is managed in accordance with the principles agreed by the Management Board and specified in the credit risk manual. These guidelines meet the minimum standards for lending business issued by the Austrian Financial Market Authority (FMA) and are updated if there are any legal or other changes affecting this type of business. The basic principles of lending business at Capital Bank include a clear credit and associated risk policy. The detailed risk assessment for each loan commitment, in particular the customer's creditworthiness rating, is very important as part of the process for approving loans. Each loan decision is based on a thorough analysis of the loan commitment, including an assessment of all relevant influencing factors. Following the initial loan applica-

tion the Bank's loan commitments are generally monitored once per year.

The risk management unit is responsible for identifying, measuring, assembling, planning, managing and monitoring the overall credit risk portfolio. The total lending exposure (loans and advances to clients including securities) and the breakdown of the risk volume by currency, risk category and country is regularly reported to the Management Board. Stress scenarios are also defined for the credit exposure which inter alia simulate a deterioration in the collateral situation. In addition, concentrations in the securities furnished as collateral are continuously analysed in order to highlight any resulting cluster or concentration risk. Credit risk data from Capital Bank is also fed into the analysis and assessment of the credit risk for the whole of the banking group.

In 2015, the lending volume (before allowances for losses on loans and advances and section 57 reserve) at

Capital Bank rose by approximately €43 million on 2014 to around €278 million.

To manage country risk, country limits have been set both at banking group and individual bank levels. Capital Bank has laid down guidelines for the approval of counterparties with the aim of minimising counterparty risk. The risk management unit is responsible for vetting new trading partners. The unit carries out checks on new partners and approves them using internal criteria.

### **Investment and real estate risk**

The investment risk represents a special form of credit risk and includes the risk of a need for depreciation or write down of the carrying amount of the investments. It describes the risk that the investments made may result in potential losses (as a result of a lack of a dividend, partial depreciation, losses made on sales or a reduction in undisclosed reserves) from equity provided, from profit-transfer agreements (assumption of losses) or from liability risks (e.g. letters of comfort). At Capital Bank the term investment risk only covers risks from so-called investments similar to loans. Risks from stocks, investment fund units and other investment securities on the other hand are stated under market risks.

The investment commitment at Capital Bank consists overwhelmingly of the investment in Brüll Kallmus Bank AG and Security KAG. The real estate risk is a subordinate risk category.

### **Liquidity risk**

Liquidity risk encompasses both insolvency risk and liquidity maturity transformation risk. The aim of managing liquidity risk is to ensure that the bank can meet its payment obligations by the due date at all times without having to incur unacceptably high costs.

The group treasury function together with cash pooling for the entire banking group is the responsibility of Group Treasury at HYPO-Bank Burgenland Aktiengesellschaft. Liquidity risk is managed centrally for the whole of the banking group under the auspices of the assets and liabilities committee, which meets regularly.

Making provision for an unforeseeable increased need for liquidity is

guaranteed through maintaining a sufficient portfolio of liquid assets which can be used for liquidity procurement at short notice. The amount of the liquidity buffer is determined based on the liquidity simulations for various scenarios which are regularly reported to the Management Board. Capital Bank had sufficient liquidity at its disposal at all times in 2015 and was above the key figures required under supervisory law at all times.

### **Macroeconomic risk**

Macroeconomic risk arises from an economic deterioration as part of the traditional economic cycle and a potential increase in the accompanying risk parameters. Macroeconomic risk is factored into the bank's risk calculations so that it would have sufficient aggregate risk cover even after such a period of deterioration without the need for massive intervention and corrective measures. The quantification of the risk assumes a contraction in GDP which is then reflected in a deterioration in default rates. Credit risk is recalculated using these modified parameters and the difference compared with the original credit risk represents the macroeconomic risk.

### **Other risks**

The main risks included within other risks are business risk, strategic risk and also reputational risk.

These risks are factored into the calculation of risk-bearing capacity in the form of a capital buffer. Business risk is defined as the risk of a loss from a negative trend in the economic environment and in the bank's business relationships. Business risk may arise primarily from a significant deterioration in market conditions, from changes in the competitive position or from changes in client behaviour. This can lead to a sustained fall in earnings and thus a decrease in enterprise value.

Responsibility for strategic corporate management lies with the Management Board of Capital Bank. The management of business risk is the responsibility of those business units that focus particularly on increasing the volume of assets under management and thus on enhancing earnings capacity. Decisions on the fundamental direction and development of the Bank's business activities harbour a risk that the consequences in terms of attaining long-term corporate objectives may include a range

of problems from undesirable developments to a complete failure to achieve objectives.

### **Summary and outlook**

At Capital Bank, suitable action is taken to limit and minimise all material risks. An analysis of risk-bearing capacity is carried out in which all the measurable risks throughout the whole of the bank are aggregated. The measures to limit risk also include a suitable limit system and the calculation of different key risk indicators.

During 2016, the Capital Bank Group will continue its business activities in line with its chosen risk strategy. One of the key areas of focus in risk management activities will be the ongoing further development of risk methods, systems and management in the HYPO-Bank Burgenland Aktiengesellschaft banking group.

Given the special nature of the business model at Capital Bank, risk monitoring in the private banking business will also continue to be a focus of risk management activities. In addition to this focal area, the ongoing ICAAP process, capital guarantees, the extension of documentation requirements, the internal control system and continuous improvements to existing risk management activities will all represent further tasks for risk management. As in previous years, dealing with the latest supervisory topics will

represent an important area in terms of risk management activities. The focus in 2016 will also remain on developing management tools, supporting the professional development of employees and ensuring continuous improvements in internal risk quantification methods.

Graz, 8 March 2016

**Report by  
the Supervi-  
sory Board**

In 2015, the Supervisory Board monitored the Management Board and endorsed its activities on the basis of four meetings of the Supervisory Board to which the Management Board submitted reports and documents as well as on the basis of repeated contact between the two boards.

The annual financial statements for 2015 and the annual report, to the extent that it provides explanations for the annual financial statements, were audited by KPMG Wirtschaftsprüfungs- und Steuerberatungs GmbH, 1090 Vienna. This audit did not give cause for any reservations and the auditors issued an unqualified audit certificate.

The Supervisory Board has acknowledged the report and proposal for the appropriation of profits submitted by the Management Board and has reviewed and approved the annual financial statements for the year ended 31 December 2015. These annual financial statements have therefore been formally adopted pursuant to

section 96 (4) of the Austrian Stock Corporation Act (AktG).

The Supervisory Board would like to take this opportunity to thank all clients for their confidence in Capital Bank – GRAWE Gruppe AG and to express its gratitude to the Management Board and all employees for their contributions in 2015.

Graz, March 2016

**Excerpt from  
the notes to  
the annual  
financial  
statements of  
Capital Bank –  
GRAWE  
Gruppe AG for  
the year ended  
31 December  
2015**

## **A. GENERAL**

Capital Bank operates as a partner for all capital market participants, including private monthly savers, small and medium-sized enterprises and institutional investors. Our range of services includes both investment and the procurement of capital.

Capital Bank is a subsidiary of HYPO-Bank Burgenland Aktiengesellschaft, which acts as the parent bank in the banking group. Key subsidiaries of Capital Bank include Brüll Kallmus Bank AG and Security Kapitalanlage Aktiengesellschaft.

The ultimate parent company that prepares the consolidated financial statements for the greatest number of entities is GRAWE-Vermögensverwaltung in Graz. The consolidated financial statements are published at the registered office of the ultimate parent company. The parent company that prepares the consolidated financial statements for the banking group of entities is HYPO-Bank Burgenland Aktiengesellschaft, Eisenstadt, Austria. The consolidated financial statements of

HYPO-Bank Burgenland Aktiengesellschaft are submitted to the Eisenstadt regional court.

The comparative figures included in this report are taken from the 2014 annual financial statements and are shown in parentheses. The annual financial statements of Capital Bank have been prepared in accordance with the provisions of the Austrian Banking Act (BWG) as amended and also – where applicable – in accordance with the provisions of the Austrian Commercial Code (UGB). The balance sheet and the income statement have been broken down in accordance with the templates included in annex 2 to section 43 of the BWG.

## **B. ACCOUNTING POLICIES**

The annual financial statements of Capital Bank have been prepared in accordance with generally accepted accounting principles and the standard requirement to provide a true and fair view of the financial position and financial performance of the company. In preparing the annual financial statements the principle of completeness has been observed. Assets and liabilities have been measured individually. All identifiable risks and impending losses that arose in 2015 or in an earlier financial year have been recognised in the financial statements. The measurement methods used to date have been retained.

In accordance with the *principle of prudence*, only those gains realised as at the balance sheet date have been reported; all identifiable risks and imminent losses have been included.

The reference exchange rates published by the ECB on 31 December 2015 (middle rates) have been used for measuring *assets and liabilities denominated in foreign currency*.

Currency forward agreements have been measured using the forward rate as at the balance sheet date.

*Securities* were measured at the lower of cost or market (strict lower of cost or market principle) regardless of whether they are classified as fixed assets or current assets. Trading securities were measured at market value. The criteria for classifying securities as fixed assets was the use of the securities for generating returns over the long term and the existence of restrictions on the use or sale of the securities. Short positions (for settlement/technical reasons) of securities are reported under other liabilities. The bank has made use of the option to amortise negative differences between cost and settlement amounts on a pro rata basis as permitted by section 56 (2) of the BWG.

*Loans and advances to banks and customers* are generally carried at their principal amounts. Appropriate specific valuation allowances are recognised to take into account all risks identifiable in the lending business. Clients have also hedged risks by entering into derivatives with Capital Bank. For its part, the bank has entered into matching transactions with partner banks that are the opposite of these hedges, forming a valuation unit together.

*Equity investments and shares in affiliated companies* are recognised at the lower of cost and fair value, the latter in the event of any permanent impairment as at the reporting date.

*Buildings and office and operating equipment* are measured at cost and reduced by depreciation. Depreciation is recognised on a straight-line basis. Low-value assets are written off in full in the year of acquisition.

Depreciation rates of for immovable assets are in the range 6.66% to 10% per annum, and for movable assets 5% to 33.3% per annum. A full year's depreciation is recognised for additions in the first half of the financial year, but only half of a year's depreciation for additions in the second half of the financial year.

*Intangible fixed assets* solely comprise purchased software. This software is amortised on a straight-line basis at rates of 20% to 33.3% per annum.

The *other assets* are recognised at cost or, in the event of any permanent impairment, at the lower fair value as at the reporting date. Underlying investments included in the other assets that form a valuation unit with liabilities evidenced by certificates are measured at fair value.

*Liabilities evidenced by certificates* include items for which the settlement amount depends on the price of the defined underlying instrument. Derivatives and collateral instruments were, in accordance with corporate law, balanced in valuation units that are formed between underlying investments and liabilities evidenced by certificates if the documented hedging purpose was available and the material and formal conditions were met. All risks from the underlying investments were taken into account via the calculations of the redemption amount of the liabilities evidenced by certificates and were therefore hedged. The effectiveness of the hedging relationship is measured using the dollar offset method. The formation of valuation units results in the fact that the assets and derivatives stated in various items and the liabilities evidenced by certificates with which the valuation units were formed are accounted for at their fair market value. Some of the liabilities evidenced by certificates have a capital guarantee.

The remaining *liabilities* are recognised at their settlement amount.

In accordance with statutory requirements, the measurement of *provisions* takes into account all identifiable risks and imminent losses as well as the amount of contingent liabilities.

The calculation of the *provision for severance obligations* is based on recognised actuarial principles using the AVÖ 2008 – P Pagler & Pagler tables for the calcu-

lation of pension insurance. The obligations are determined using the projected unit credit method. The calculations are also based on a pensionable age of 65 for men and 60 for women. A long-term market discount rate of 2.2% was applied (previous year: 2.2%). The salary increase trend used in the calculations was 3.0% (previous year: 3.0%).

The calculation of the *pension provision* is also based on recognised actuarial principles using the AVÖ 2008 – P Pagler & Pagler tables for the calculation of pension insurance. The projected unit credit method is used to calculate the obligation. The group of beneficiaries consists solely of pension recipients. The calculation used a long-term market discount rate of 2.0% (previous year: 1.9%).

Actuarial gains and losses on non-current personnel provisions are recognised in profit and loss in the period in which they arise. All changes are recorded in the personnel expenses. For the first time, in 2015 a fluctuation discount

was considered when calculating the non-current personnel provisions.

In the 2015 annual financial statements, as in the previous year the bank made use of the election option available under section 57 (1) of the BWG.

*Derivatives* are accounted for in accordance with the principle of the individual valuation method. Valuation units are formed if there is a documented purpose regarding the hedging of an underlying transaction (assets, liabilities along with pending transactions) and if the material and formal conditions are met with banking book derivatives.

Customer transactions and securities in equity are used as underlying hedging transactions. The transactions are hedged based on the individual transactions (micro hedging relationships). The risks to be collateralised relate to the interest rate risk and the currency risk. They are managed primarily through swaps and currency forward agreements. The hedging period is essentially identical to the term of the underlying transaction.

Effectiveness is measured almost exclusively in a simplified manner (critical term match), since all parameters for the underlying transaction and the hedging transaction (in particular the term, nominal value and interest) which determine the extent of the hedged value changes are identical but contrary with the hedging relationships used. This is seen as an

indicator of a completely effective hedging relationship. For the remaining hedging relationships the effectiveness is determined using the dollar offset method.

## **C. BALANCE SHEET DIS- CLOSURES**

### **Fixed assets**

The breakdown of fixed assets and the changes in fixed assets during the reporting year are presented in the statement of changes in fixed assets (see annex I to the notes). As at the reporting date, the bank held neither developed nor undeveloped land as part of its property and equipment, as was also the case in the previous year.

### **Securities**

The total value of the securities portfolio (including pro rata interest) as at the end of the year amounted to €336.5 million (previous year: €333.1 million). Of this total, an amount of €206.6 million (previous year: €197.7 million) was accounted for by underlying instruments for liabilities evidenced by certificates and total return swaps with which hedging relationships were formed. Underlying instruments amounting to €94.2 million

(previous year: €89.7 million) were pledged as collateral in favour of issue buyers and, of this amount, €1.4 million (previous year: €1.9 million) were assigned to one collateral trustee. Bonds and other fixed-income securities with a carrying amount of €12.9 million (previous year: €9.7 million) were due within one year.

The difference between the cost and higher fair value as at the balance sheet date for the listed securities not classified as financial assets and recognised at cost was €1.6 million (previous year: €1.8 million).

The bank's fixed assets as at 31 December 2015 included securities with a carrying amount of €53.4 million (previous year: €56.0 million). The difference between the cost and higher fair value amounted to €10.0 million (previous year: €9.7 million). The difference between the carrying amount and the lower settlement amount for fixed-income securities classified as fixed assets amounted to €257 thousand (previous year: €431 thousand).

Securities classified as fixed assets (including pro rata interest) were included in the following items:

- in A2, Public-sector debt instruments, in an amount of €18.7 million (previous year: €18.7 million);
- in A3, loans and advances to banks, in an amount of €1.0 million (previous year: €1.0 million);

- in A5, Bonds and other fixed-income securities, in an amount of €20.1 million (previous year: €23.2 million);
- in A6, Shares and other variable-yield securities, in an amount of €14.4 million (previous year: €13.9 million).

For further information please refer to the attached statement of changes in fixed assets (annex 1).

The company maintains a securities trading book as defined by Article 103 CRR. Items in the trading book are recognised at market value. As at 31 December 2015, the trading book did not include any securities, as in the previous year.

Capital Bank had provided capital guarantees in the trading book, specifically in connection with the PZV (prämienbegünstigte Zukunftsvorsorge) product, a special pension plan product offered in Austria with a government subsidy, in an amount of €76.7 million (previous year: €80.3 million) and in connection with fund-linked life insurance in an amount of €42.4 million (previous

year: €30.0 million). Under the arrangements for capital guarantees in the PZV product and fund-linked life insurance, the associated market risk is transferred from the pension or insurance provider to Capital Bank. Each of the assets behind the capital guarantees is considered separately (as a substitute for the guarantee) to assess whether there is any need for a provision for the guarantees.

The breakdown of the securities included in bonds and other fixed-income securities and in shares and other variable-yield securities was as follows:

in € '000			Of which in fixed assets	Of which in current assets
	listed	not listed		
<b>2014</b>				
Bonds and other fixed-income securities	69,615	828	23,197	47,246
Shares and other variable-yield securities	23,799	114,419	13,898	124,320
<b>2015</b>				
Bonds and other fixed-income securities	61,301	300	20,144	41,457
Shares and other variable-yield securities	27,051	121,185	14,357	133,878

As in the previous year, the bonds did not include any assets of a subordinated nature.

As a consequence of the crisis in Greece, the bank has closely monitored trends in the peripheral countries of the euro zone and has imposed strict risk requirements relating to exposures with and in these countries.

## Equity investments

The reported equity investments and shares in affiliated companies are not admitted to trading on a stock exchange.

As at 31 December 2015, the bank held direct equity investments in the following entities with shareholdings of at least 20%<sup>1)</sup>

### LIST OF EQUITY INVESTMENTS

Equity investments and shares in affiliated companies	Share capital in € '000	Shareholding	Equity in € '000 <sup>2)</sup>	Profit for year in € '000 <sup>3)</sup> (provisional)	Balance sheet

Loans and advances to affiliated companies	< 1 year	4,126	9,119
Various sales invoices and services	< 1 year	4,482	8,274

## Other liabilities

This item includes liabilities to tax authorities amounting to €4,847 thousand (previous year: €4,870 thousand) and securities clearing liabilities of €1,551 thousand (previous year: €3,105 thousand). Expenses that were only payable after the reporting date largely consisted of personnel expenses of €2,495 thousand (previous year: €1,912 thousand) and various other administrative expenses. Other liabilities amounting to €19,878 thousand (previous year: €22,042 thousand) are due for payment within one year. The other liabilities include liabilities due to affiliated companies amounting to €6,912 thousand (previous year: €3,601 thousand).

## **Liabilities evidenced by certificates**

The liabilities evidenced by certificates form valuation units with assets and derivative transactions stated in various items (underlying investments). Liabilities evidenced by certificates are due in the next financial year amounting to €0.0 million (previous year: €9.2 million).

## **Other provisions**

*Other provisions* primarily comprised provisions for losses amounting to €5,988 thousand (previous year: €4,028 thousand), for unused leave amounting to €705 thousand (previous year: €767 thousand), for other personnel expenses amounting to €4,695 thousand (previous year: €3,779 thousand) and for fee and commission payments of €3,286 thousand (previous year: €3,579 thousand).

## **Equity capital**

The company's share capital remained unchanged at €10.0 million and was divided into 1,376,030 no-par-value shares. Of the total shares, 729,030 were bearer shares and 647,000 registered shares.

The capital reserves result from payments and deposits made by the shareholder.

The retained income of the company encompass statutory and voluntary reserves as well as profits generated in previous years, reduced by dividend disbursements.

## **D. INCOME STATEMENT DISCLOSURES**

A breakdown of income by geographical markets pursuant to section 64 (1) no. 9 of the BWG has not been included because the geographical markets do not differ materially from the location of the bank organisation.

The loan processing fees amounting to €1,110 thousand stated in the interest income (previous year: €218 thousand) were deferred as in the previous year to reflect the duration of the loan.

From the first time, the item interest and similar expenses include negative interest amounting to €81 thousand from deposits at the Austrian National Bank.

Income from securities and equity investments included €3,100 thousand (previous year: €7,100 thousand) relating to dividends from affiliated companies.

Income/expenses from financial operations consisted of currency

valuation gains and gains on the disposal of securities together amounting to €6,331 thousand (previous year: €3,706 thousand) And losses on similar transactions amounting to €7,149 thousand (previous year: €4,052 thousand).

Other operating income largely comprised income from service level agreements amounting to €1,607 thousand (previous year: €1,570 thousand) and income from the reversal of provisions amounting to €221 thousand (previous year: €2,137 thousand).

Expenses for severance payments and contributions to occupational pension funds included occupational pension fund expenses of €73 thousand (previous year: €68 thousand).

The recognition of an income tax prepayment permitted pursuant to section 198 (10) of the Austrian Commercial Code (UGB) amounted to €4.2 million as at the reporting date (previous year: €3.3 million). The bank did not make any use of the capitalisation option.

**OBLIGATIONS FROM THE USE OF PROPERTY AND EQUIPMENT NOT REPORTED IN THE BALANCE SHEET (EXCLUDING VALUE GUARANTEE):**

	€ '000	€ '000
Obligations 2016 (2015)	962.0	(830.0)
Obligations 2016–2020 (2015–2019)	5,318.0	(4,550.0)

*The allowances for losses on loans and advances and additions to provisions for contingent liabilities and credit risks were adjusted as permitted by section 57 (1) of the BWG.*

Reversals of write-downs on securities not recognised for reasons in connection with tax law amounted to €1,171 thousand (previous year: €1,416 thousand). This could lead to tax expenses in subsequent years of up to €293 thousand (previous year: €354 thousand).

Net income tax pursuant to section 237 no. 6b of the UGB attributable to the current financial year amounted to €3,500 thousand (previous year: €3,514 thousand). A net tax income amount of €185 thousand (previous year: €1,235 thousand) are related to taxes from prior periods.

Disclosure of the expenses incurred in the financial year for auditor fees has not been included because these disclosures are published at banking group level by HYPO-Bank Burgenland Aktiengesellschaft.

## **E. ADDITIONAL DISCLOSURES**

As at the reporting date, assets reported on the balance sheet denominated in foreign currency amounted to €187.0 million (previous year: €155.6 million) and the liabilities on the balance sheet denominated in foreign currency were €38.6 million (previous year: €27.8 million).

The company's total return on assets, the quotient of the annual net profit after taxes divided by the total assets on the balance sheet date is 1.0% (previous year: 2.7%).

Currency forward agreements and swaps were measured using the rates published by the ECB for the reporting date taking into account the interest rates for the currencies involved and the residual maturities.

Positive and negative fair values are recognised if derivatives are assigned to the trading portfolio or form part of a valuation unit with the bank's own issues or other underlying transactions.

Negative fair values that are not covered by an equivalent positive fair value from an underlying transaction in a hedging relationship are taken into account by recognising a provision for imminent losses from pending forward transactions. As at 31 December 2015, no such provision had been recognised (previous year: €945 thousand).

### **Contingent liabilities and other financial commitments**

The contingent liabilities include guarantees and financial commit-

ments amounting to €6.5 million (previous year: €11.2 million).

The credit risks reported below the line on the balance sheet related to loans that had not yet been drawn amounting to €29.3 million (previous year: €24.7 million).

As a deposit to cover arrangements there are securities with a carrying amount of €21.5 million (previous year: €17.5 million). Securities with a carrying amount of €57.2 million (previous year: €54.6 million) were held blocked as a deposit to cover the use of the refinancing option via the ECB tender procedure. There are also cash deposits in the amount of €0.5 million (previous year: €0.5 million). In addition, the bank held cover assets for pension provisions in a volume of €269 thousand (previous year: €269 thousand) and cover funds for trust money amounting to €320 thousand (previous year: €320 thousand).

As a deposit to cover arrangements there are securities with a carrying amount of €17.5 million (previous year: €16.2 million). Securities with a carrying amount of €54.5 million (previous year: none) were held blocked as a deposit to cover the use of the refinancing option via the ECB tender procedure. There are also cash deposits in the amount of €0.5 million (previous year: €8.1 million). In addition, the bank held cover assets for pension provisions in a volume of €269 thousand (previous

year: €269 thousand) and cover funds for trust money amounting to €320 thousand (previous year: €320 thousand).

## **F. OTHER DISCLOSURES**

During the 2015 financial year, the bank had an average of 147 (previous year: 157) salaried and 5 (previous year: 7) non-salaried employees.

As in the previous year, the loans and advances to customers as at 31 December 2015 did not include any loans to members of the Management Board. There are loans to Supervisory Board members amounting to €60 thousand (previous year: €0 thousand).

The expenses for severance payments and pensions, including additions to provisions, for active members of the Management Board and for other executives came to €155 thousand (previous year: €623 thousand); the equivalent expenses

for other employees were €514 thousand (previous year: €422 thousand).

Expenses for pensions paid to former members of the Management Board amounted to €103 thousand (previous year: €90 thousand).

Regarding remuneration paid to the members of the Management Board, the details are not disclosed in application of the option available under section 241 (4) UGB. The members of the Supervisory Board did not receive any remuneration during the financial year under review.

**Audit Certificate**

**The complete annual financial statements of Capital Bank – GRAWE GRUPPE AG for the year ended 31 December 2015 were given the following unqualified audit certificate by the appointed independent auditors:**

**UNQUALIFIED AUDIT CERTIFICATE**

**Report on the annual financial statements**

We have audited the accompanying financial statements of Capital Bank – GRAWE Group AG, Graz, consisting of the balance sheet as at 31 December 2015, the income statement for the financial year ending at this reporting date, and the notes.

**Management's responsibility for the financial statements**

The Management Board of the company is responsible for the preparation and proper overall presentation of the financial statements in accordance with applicable Austrian corporate and bank laws and for the internal controls it deems necessary in order to enable the preparation of financial statements that are free from material misstatements due to either inaccuracies or fraud.

## **Responsibility of the bank auditor**

It is our responsibility to express an opinion on these financial statements, based on our audit. We conducted our audit in agreement with the generally accepted auditing standards in Austria. These standards require the application of the international auditing standards (International Standards on Auditing, ISA). According to these standards, we must comply with the professional rules of conduct, and plan and perform the audit in such a manner that material misstatements in the financial statements are detected with reasonable certainty.

An audit of the annual financial statements includes the performance of audit procedures to obtain audit evidence for the figures and information contained in the annual financial statements. The procedures selected depend on the auditor's judgement, including the assessment of the risks of material misstatement of the financial statements, whether due to fraud or error. When judging these risks, the auditor takes into consideration the preparation and proper overall presentation of the annual financial statements by the bank's relevant internal control system, in order to plan audit activities that are appropriate under the given circumstances. However, these activities do not aim to make a judgement of the effectiveness of the company's internal control system. An audit of the financial statement also includes an assessment of the appropriateness of the accounting principles and the acceptability of the

estimates made by the legal representatives of the bank, as well as an evaluation of the overall presentation of the financial statements.

In our view, the audit evidence we obtained provides a satisfactory and suitable basis for our audit opinion.

### **Opinion**

Our audit did not give rise to any objections. In our opinion, which is based on the findings of our audit, the financial statements comply with legal requirements and give a true and fair view of the financial position of the company as at 31 December 2015 and of its financial performance for the financial year ending on said date, in agreement with the Austrian generally accepted accounting principle and the special statutory principles.

### **Comments on the Management Report**

Pursuant to statutory provisions, the management report is to be

audited as to whether it is consistent with the financial statements and as to whether the other disclosures are not misleading with respect to the company's position. The audit certificate also has to contain a statement as to whether the management report is consistent with the financial statements.

In our opinion, the management report is consistent with the financial statements.

Vienna, on 8 March 2016

KPMG Austria GmbH  
Wirtschaftsprüfungs- und Steuerberatungsgesellschaft

  
Mag. Michael Schlenk  
Wirtschaftsprüfer

The annual financial statements containing our audit certificate may only be published or forwarded in the version that we have endorsed. This audit certificate relates exclusively to the full German-language annual financial statements including management report. The provisions of section 281 (2) of the UGB must be observed with regard to any differing versions.

**The following financial statements in accordance with UGB/BWG for the subgroup of Capital Bank – GRAWE Group AG are intended to provide the reader with information on the financial performance of Capital Bank and its subsidiaries. The subgroup accounts in accordance with UGB/BWG were audited by the independent auditor as part of the audit of the consolidated financial statements of HYPO-Bank Burgenland AG.**
